

INSINGER PROJECT SPOTLIGHT

Baylor University, Waco Texas

The foodservice operation at a large university is complex. The daily task of preparing and serving 3 meals a day, to a student body of over 14,000, can be quite a challenge. Add clean-up to the operation and it becomes overwhelming. The right equipment becomes essential in getting the job done cost-effectively and efficiently.

Baylor University, a 735 acre campus, located on the banks of the Brazos River in Waco, Texas, chose Insinger to streamline its foodservice operation with a Super 106-2 Rack-A-Matic dishwasher, 140' tray return conveyor system and pulper system. With two drop-off windows the dishroom is now more efficient, labor and space saving.

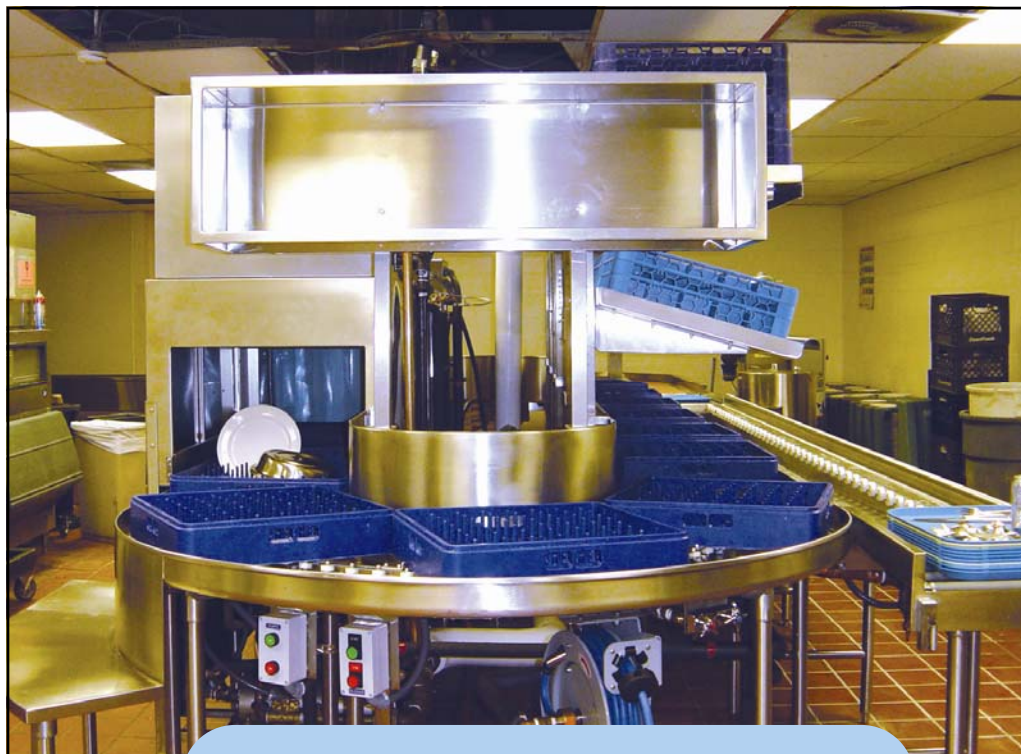

Insinger is one source for the entire dishroom; we provide the equipment, installation and design assistance!

Put Insinger To Work For You!
