

ENGINEERING BULLETIN

Insinger's new rinse system processes more racks per hour with less water usage!

With the recent and continuing climb of energy costs, Insinger took on the challenge of making its equipment even more cost-effective.

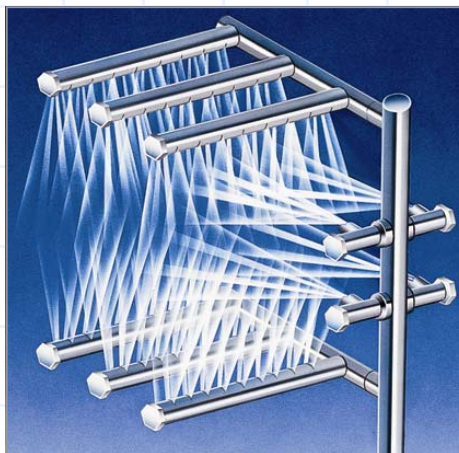

By redesigning the final rinse system we were able to significantly lower water usage while increasing the total number of dishes washed.

Coupled with the patented and proven CrossFire® Wash System, Insinger dishwashers are the most economical, efficient and reliable on the market today.

Insinger Features:

- CrossFire® Wash System
- No fast racking with s/s lugs and chain
- Raised control panel
- Color-coded curtains
- High torque drive
- Double door safety catches
- SureFire® Start-Up & Check-Out Service
- Simplified full width scrap screen

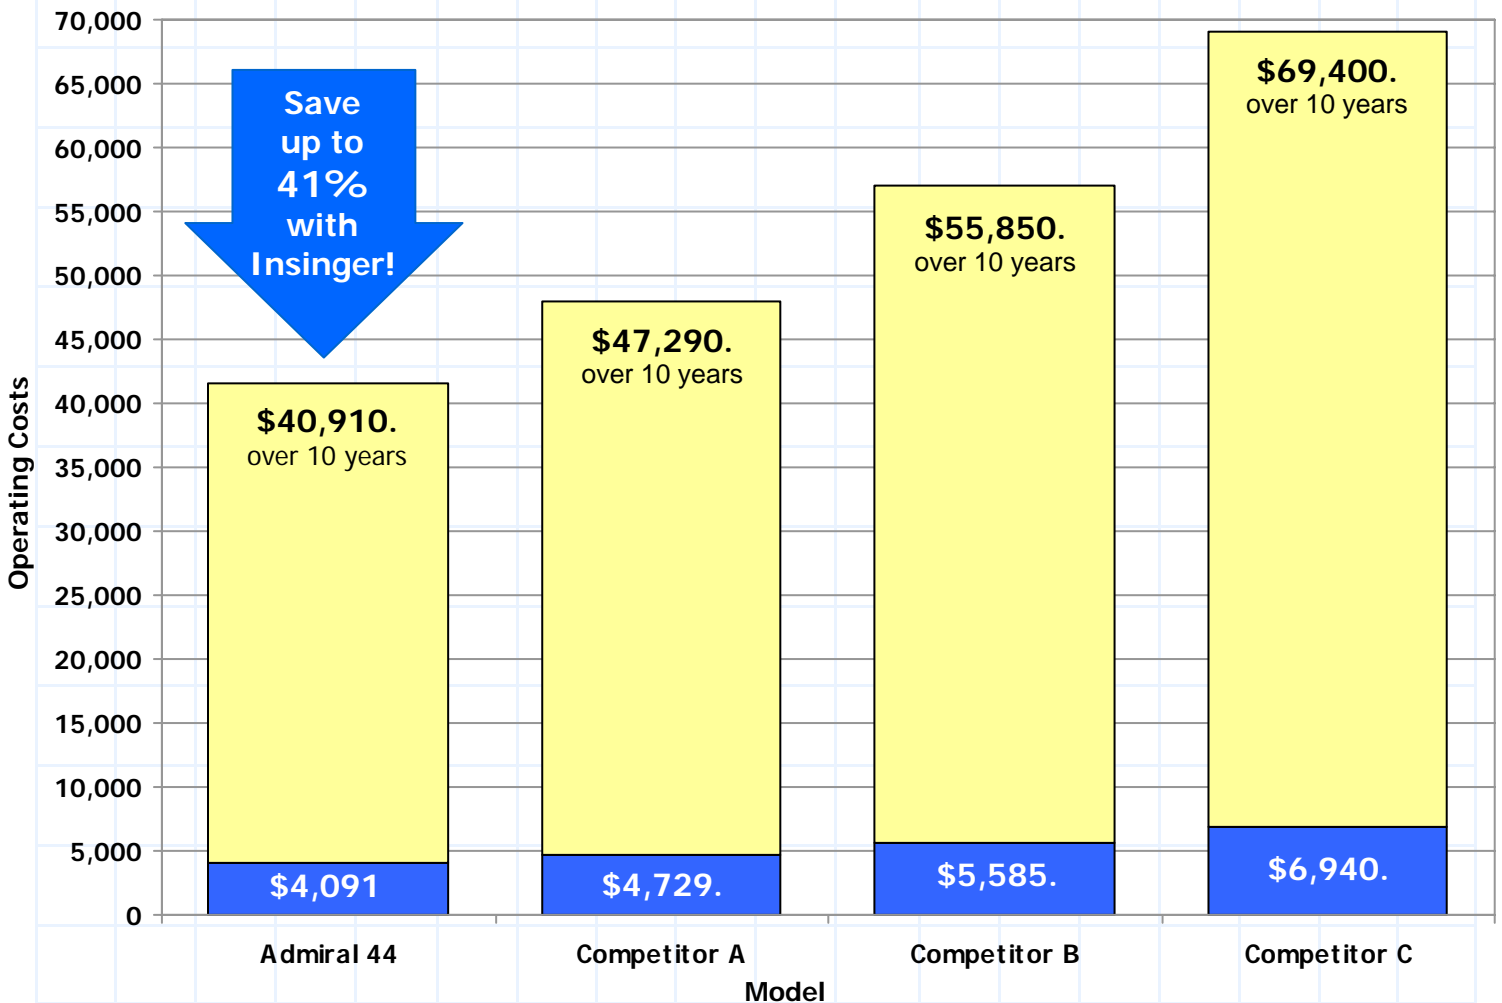

The **CrossFire® Wash System** reaches soil in all corners and crevices. The side wash arms, with the upper and lower wash arms, create an efficient spray pattern and conserve on water.
